

HVAC DUCT SYSTEMS

A Safe Fleet Brand

FOR MID-SIZE, SHUTTLE, SCHOOL BUS, AND SPECIALTY APPLICATIONS

Keep air inside the passenger compartment moving and flowing with superior duct systems from Pretoria.

Providing excellent sound and dampening characteristics, these systems meet FMVSS and APTA Guidelines. In addition, our aluminum composite panels resist, drumming, oil-canning and condensation.

Each system can incorporate reading/dome lights, speakers, and adjustable air vents.

Our design team works closely with the bus OEM, the AC OEM and the customer to provide air moving systems that are both functional and aesthetically pleasing. For example, our vacuum forming and mold construction processes ensure the ABS end caps provide an excellent "fit and finish".

Whether it's a roof top, side mount, or rear evaporator system, Pretoria systems meet a wide variety of needs and applications. Contact your customer service team for additional information.
