

# Safe Fleet Focus Ecosystem

Scenario: Hotlisted Vehicle Encounter

## Smart Patrol with ALPR

While patrolling, an officer using the **FOCUS® In-Car Video System with ALPR** automatically scans vehicles around the patrol car. The officer receives an alert.

## License Plate Aggregation (LPA) and NEXUS Integration

License plates are automatically sent to the **NEXUS™ Digital Evidence Management System**. From there, investigators using license plate analytics (LPA) can search historic plate data.

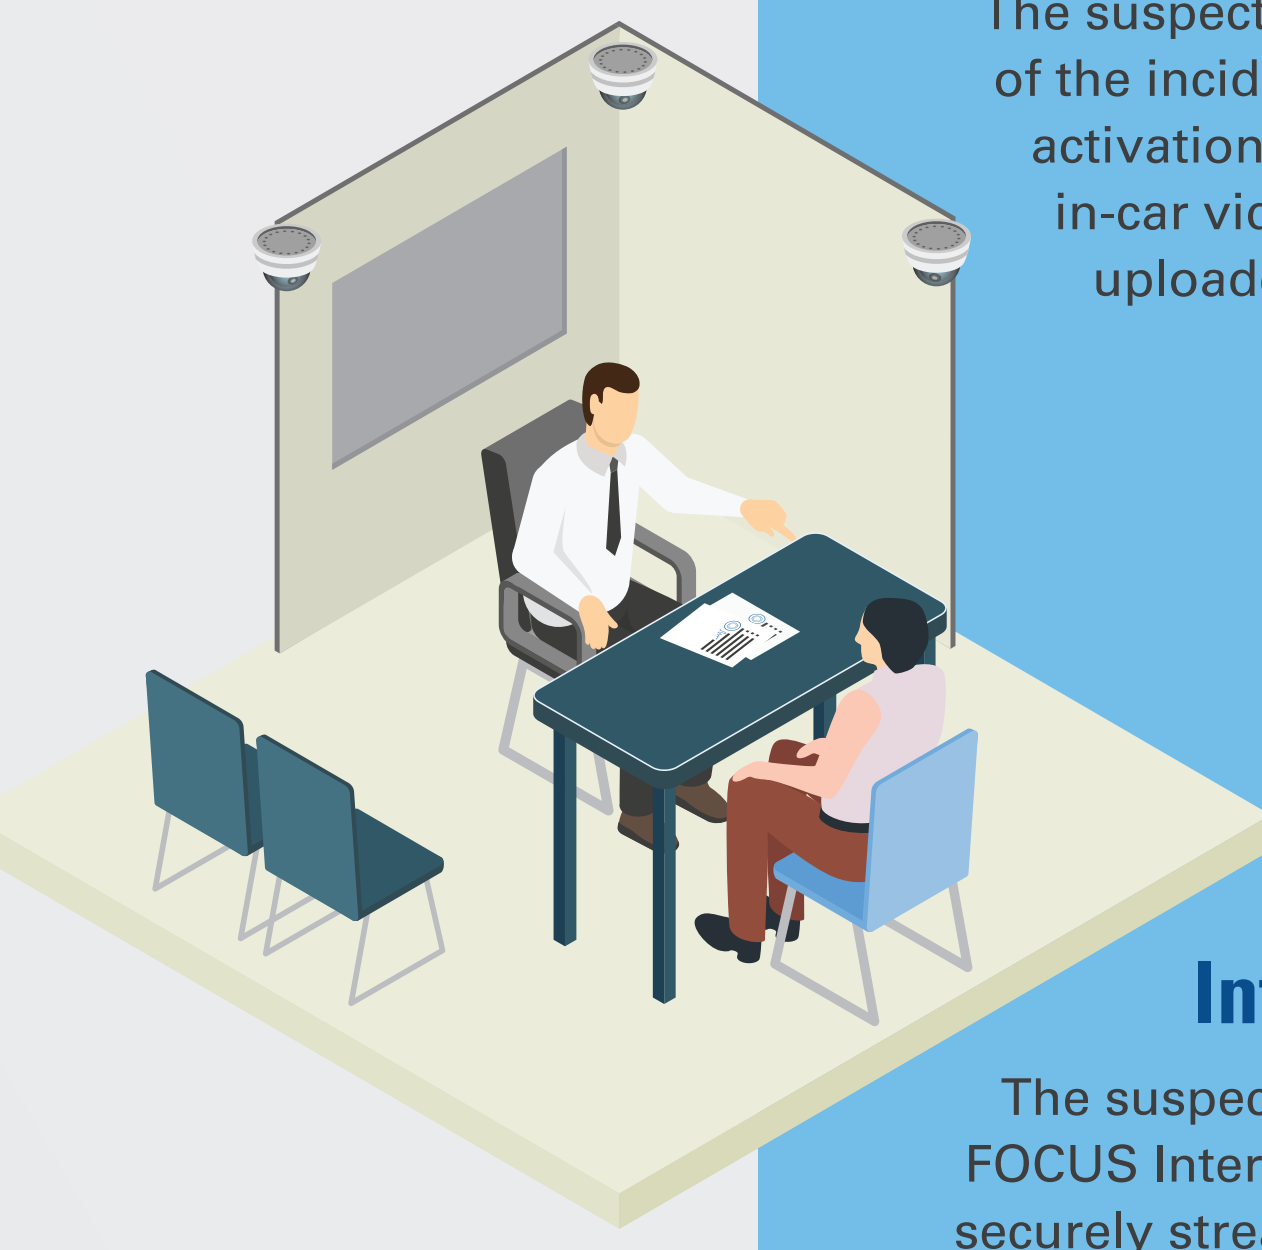

## Suspect Encounter & Response

The officer engages and the individual becomes agitated and non-compliant. When the officer draws their firearm, **Safe Fleet Holster Activation™** triggers a recording on the officer's **FOCUS® Body Camera** automatically.

## Arrest & Evidence Capture

The suspect is taken into custody. Multiple perspectives of the incident are captured from each of the recording activations (various remote triggers, body cameras, in-car video systems). All footage is automatically uploaded to **NEXUS™ Evidence Management**.

## Interview & Case Creation

The suspect is interviewed in a room enabled with the **FOCUS Interview Room** application. High-quality video is securely streamed and stored. All footage is automatically uploaded to **NEXUS™ Evidence Management**.

## Case Sharing & Court Prep

With the case built, sensitive material stays protected using **Safe Fleet® Redact™**. Evidence is shared securely and efficiently via **Safe Fleet Courier** on the **NEXUS™ Evidence Management** platform for joint prosecution.
