AVL GPSAVL delivers automated vahicle location and status of your service vahicle fleet when and where it is needed. Real-time GPS-based vehicle tracking data analysis.AlarmsAlarms report allows you to track events; and provides both a summary of all event instances during quick acceleration, etc).MappingDelivers real-time and historical views into your fleet, driver, and collection services activity. You gain an intuitive back office view into what's going on for each route, truck and driver.VideoA unified video management software platform expable of remote device management, video review, and evidence gathering.Live Stream VideoA web-based solution for full fleet management capability which allows live video streaming and immediate access to real time vehicle information, such as exact location and tracking, fited status and alers or video recorder health check.WasteAppWeb Services API Integration to fird party software and ERP solutions, including but not limited to functorooft Dynamics 368 BC ENVIS.Picture-VerifyWhen an exception has to be recorded, for example, when a customer has not placed their garbage care at time automatically or manually.Firebies flivers to perform pre- and post-trip inspections with a Mobile Data Terminal (MDT), providing mobility and convenience, rapid communication with the maintanance department in case of vehicle issues and uses the MDT Lock, GPS, and photo and video uplads to verify the accuracy and validity ioring portors.Firebies fliversBouto System provides management toals for collection service servity, builling, and customer service issues. You benafit from efficient routo scheduling and dispatching, and real-time service quality monitoring.SF Vehicle InspectionBody	FEATURE DEFINITIONS:	
Alerms the report poriod, as well as details of each instance of G-Sensor Activity (hard stopping, speeding, quick acceleration, etc). Mapping Delivers real-time and historical views into what's going on for each route, truck and driver. Video A unified video management software platform capable of remote device management, video review, and evidence gathering. Live Stream Video A web-based solution for full fleat management capable of remote device management, video review, and evidence gathering. Live Stream Video A web-based solution for full fleat management capability which allows live video streaming and immediate access to real time vehicle information, such as exact location and tracking, fleat status and alerts or video recorder health check. WasteApp WasteApp provides solid waste haulers with an automated solution for service provision, documentation, and, ultimately, billing. Safe Fleet SmartConnect Web Services API Integration to third party software and ERP solutions, including but not limited to Microsoft Dynamics 366 BC ENWIS. Fleature-Verify When an exception has to be recorded, for example, when a customer has not placed their garbage cart at the curb, or when there are extra carts or bags that need to be picked up a picture can be taken automatically or manually. Fleature-Verify Enables drivers to perform pre- and post-trip inspections with a Mobile Data Terminal (MDT), providing issues and uses the MDT clock, GPS, and photo and video upleads to varify the accurscy and velidity of inspection reports. Driving Directions	AVL/GPS	
MappingYou gain an intuitive back office view into what's going on for each route, truck and driver.VideoA unified video management software platform capable of remote device management, video review, and evidence gathering.Live Stream VideoA web-based solution for full flet management capability which allows live video streaming and immediate access to real time vehicle information, such as exact location and tracking, flet status and alerts or video recorder health check.WasteAppWasteApp ^{IN is} an application for service verification, on-board computing solution and on-board cameras, WasteApp provides solid waste haulers with an automated solution for service provision, documentation, and, ultimately, billing.Safe Fleet SmartConnectWeb Services API Integration to third party software and ERP solutions, including but not limited to Microsoft Dynamics 365 BC ENWIS.Picture-VerifyEnables drivers to perform pre- and post-trip inspections with a Mobile Data Terminal (MDT), providing mobility and convenience, rapid communication with the maintenance department in case of vehicle issues and uses the MDT clock, GPS, and photo and video uploads to verify the accuracy and validity of inspection reports.Driving DirectionsTurn-by-turn driving directions are available in two different modes: sequence and proximity.Route System provides management tools for collection service verification.FifDAbility to capture by container assigned service location by scanning an embedded RFID tag via an RFID Reader mounted on truck.Route OptimizationIntegration to third party truck scales including but not limited to AirWeigh, LoadMan, Vulcan, Digiscale, SSI, etc. Allows the MDT to capture, record and report weights for each stop.<	Alarms	the report period, as well as details of each instance of G-Sensor Activity (hard stopping, speeding,
Video and evidence gathering. Live Stream Video A web-based solution for full fleet management capability which allows live video streaming and immediate access to real time vehicle information, such as exact location and tracking, fleet status and alerts or video recorder health check.
